

DUO LARGE TEST HEAD

Preventative Maintenance Kit

Save 25% when purchasing the kit
 Kit price is \$2,000 (purchased separately \$2669).

This Preventative Maintenance Kit is recommended by the MVTST (formerly Credence) field service team supporting the Credence legacy tester around the world. Maximize your tester reliability and uptime by replacing these items. Lead times for consumables can be as much as 4-6 weeks and if fans are not replaced promptly your tester can overheat which can change the system timing and affect your test results. Pogo pins need to be replaced periodically to maintain signal integrity and keep yields high. Mechanical docking cables wear out about every 12 months and when they break, you cannot dock to a prober or handler bringing the tester down. Be proactive and have this kit of consumables on your shelf and ready to be installed in your tester when needed reducing downtime and increasing reliability. Call your local MVTST office for more details.
